- by appointment for another time or over zoom

Course Description

Data analytics, the process of analyzing, revealing, interpreting and visualizing information concealed inside big data is revolutionizing daily life, as used by companies such as Amazon, Google and Facebook, for the diagnosis of medical conditions or the way medical claims are handled, for investment strategies and real estate pricing, and in academia, with the analysis of historical texts, understanding the deliberations of the Supreme Court or the European Commission, or processing large amounts of genomics data.

In this class, students will be introduced to techniques to acquire data from the web, manipulate and pre-process data into manageable forms, perform analyses from a descriptive and predictive standpoint, and learn the basics of visualization of the result, all with a focus on storytelling through data, enhancing data literacy.

In this course you will use the Python programming language to scrape web data, prepare data for analysis, analyze to produce explainable results, and visualize those results. Throughout we will discuss the pitfalls, ethics and challenges of working with data. A 1-page schedule-at-a-glance is included at the end of the syllabus.

This course requires the pre-approval of the department. For more information, please visit: <https://union.edu/advising-registration/pre-approval>.

Schedule

Weekly Schedule

Schedule

W.	TOPIC	Due	Runestone
1	Introduction to Data Analytics	Introductory Survey	httlads ch. 1 & 4
2	Using Descriptive Statistics to Talk About Data	HW 0	
3	Python Tools for Data Analytics	HW 1	
4	PANDAS for Exploratory Data Analysis	HW 2, project data	httlads ch. 2 & 7
5	Collecting Data from the Web	HW 3, project question	httlads ch. 5
6	Data Wrangling and Cleaning	HW 4	
7	Merging, selecting and transforming data	HW 5, project outline	httlads ch. 6
8	Simple Machine Learning Methods to Explore Data	HW 6, Midterm Exam	httlads ch. 9
9	Evaluating performance	Project Draft	
10	Project Presentation	Final Project & Presentation	

Resources

Runestone (Online Textbook)

- <https://runestone.academy/runestone/default/user/register>
- your Union College email
- unioncollege_httlads_winter26 as the course name
- for review, you may also use the Python course: unioncollege_py4e-int_winter26_da

Google Colab Pro

- Pro account sign-up: <https://colab.research.google.com/signup>
- Use your Union email
- A pro account is not needed for this course, just an option Union pays for
- Notes template: <https://colab.research.google.com/drive/15rPmKyQKCCbwsdDCpC39o8hczWZ-B5zV?usp=sharing>

Late Token Form

- These are for project-related deadlines, not Rosalind problems
- These can be used for any reason
- These do not apply to your final deadline
- Form link: <https://forms.gle/6W3LrkK4SdhWGSzL7>

Python Style Guide

- PEP 8
- should be used in all code cells of Colab notebooks
- Link: <https://peps.python.org/pep-0008/>

Links to Google Drive folders

- uploading for peer review: https://drive.google.com/drive/folders/1W-FplVDW2b9qG9BDEaPMNEMWRsFrJabE?usp=drive_link

Syllabus

Syllabus

CSC233 - Bioinformatics Syllabus

1 CSC 243: Bioinformatics

- Union College, Spring 2026
- Georgia Doing, PhD
- email: doingg@union.edu,
- office: Steinmetz 108B

2 COURSE BASICS

- Lecture: M/W/F 11:45 am - 12:50 pm
- Location: ISEC 070
- Student/Office Hours:
 - Monday 3:00 pm - 4:30 pm
 - Tuesday 2:00 pm - 3:30 pm
 - subject to change, check course website for most up-to-date schedule
 - drop-in or schedule a 15 minute slot: <https://calendar.app.google/8bus6pfDvyphR9ar5>
 - by appointment for another time or over zoom

3 OVERVIEW

Bioinformatics is the study of how information technology, computer science principles, and algorithmic techniques have affected and informed the study of biology in the 21st century (and vice versa). Specifically, the field of genomics (the study of the function of genes) has generated a tremendous amount of data to be analyzed. Bioinformatics brings to bear data management and analysis techniques found in the information processing field to discover pertinent knowledge in this sea of data that has applications in research and medicine.

In this course, you will learn about both biological and computer science concepts, how they interact with each other, and how they are used together to further research in genomics.

3.1 Prerequisites and Course Format

The prerequisite for this course is BIO 205 (Current Topics in Molecular Biology) OR any introductory programming course CSC 10x. Because of this, it is expected that the student population of this course will consist of a mix of Biology and Computer Science students, each student bringing their own knowledge base, skill set, and perspective to the course. Given this diverse population, the first half of the course will concentrate on exposing students from one discipline to the fundamental concepts of the other (and vice versa) in order to gain a working knowledge of the field. Computer Science students will be taught the principles of Molecular Biology, and Biology students will be exposed to the essentials of Computer Science. In the second half of the course, we will assemble teams consisting of both types of students to work on a series of directed projects, the goal of which is to get students to creatively work in the inter-disciplinary fashion that is central to the emerging field of Bioinformatics.

4 LEARNING OBJECTIVES

4.0.1 in Biology:

- basic Mendelian genetics
- the flow of genetic information from DNA to proteins
- molecular biological approaches and their applications
- genomic projects and comparative genomics

4.0.2 in Computer Science:

- algorithm design as a means of problem solving
- basic programming using the Python programming language
- data organization schemes, analysis techniques, and how they apply to biological applications
- further understanding of what computers can and cannot solve easily

4.0.3 in Bioinformatics:

- pairwise and multiple alignment matching of gene sequences
- polymerase chain reaction (PCR) techniques
- automated primer detection phylogenetic trees
- gene prediction

5 CLASS POLICIES AND GUIDELINES

The Computer Science Department as a whole welcomes all people, regardless of age, background, beliefs, ethnicity, gender identity, gender expression, national origin, religious affiliation, sexual orientation and any other differences, be they visible or non-visible. It's also important to recognize that institutional racism has prevented members of marginalized groups - especially black, indigenous and other people of color (BIPOC) - from fully participating in the field of Computer Science.

You. Yes you, the one reading this syllabus. You belong here.

As an instructor, I will do my utmost to uphold these principles and to treat everyone with respect. As students in this class, I expect you to do the same since one person is not a community unto themselves. We're all in this together, so let's treat each other well. Lastly, I welcome feedback on issues we might discuss or ways that our class can be a more just one for all people.

6 COURSE MATERIALS

6.0.1 Texts (2-3 required)

- Jean-Michel Claverie, Cedric Notredame, Bioinformatics for Dummies, 2nd Edition, Wiley Publishing, 2007.
- Allen B. Downey, Jeffrey Elkner, and Chris Meyers, How to Think Like a Computer Scientist: Learning with Python, Green Tea Press. This book is free! Read it online at <http://www.greenteapress.com/thinkpython/thinkCSpy/html/>
- Kratz, R.F., Molecular & Cell Biology for Dummies, 2nd Edition, Wiley Publishing, 2020. Only students who have not taken BIO 205 should buy this book.

We'll use the following websites and software throughout the course:

- The course website: <https://georgiadoing.github.io/tufte-quarto/>
- Gradescope: used to submit programming assignments
- Google Colab: the cloud-based platform to write and run Jupyter Notebooks with python code

7 COURSE RESOURCES

The course website has a list and links to the readings and software resources that we are going to use. In class, we are going to use the Linux machines in ISEC 070. Outside of class you have a choice of hardware. You can access Google Colab via a browser on your own

machine, install the software on your own computer (Python is freely available for Windows, Mac, and Linux) or you can work in one of the Computer Science labs. We have three spaces that you can use 24/7 using your ID card, except when classes are being held in them:

- Olin 107
- PASTA Lab (ISEC 051+)
- Computer Science Resource room (Steinmetz Hall, 209A)

8 LIBRARY RESOURCES

The library is available to help you with your research needs! Librarians can help you develop research questions, search for and select the best sources for your projects, identify research strategies, evaluate sources, and assist you with creating citations. There are multiple ways for you to contact a librarian. For more information, please see our Ask A Librarian page: <https://www.union.edu/schaffer-library/ask-a-librarian>.

9 ACCOMODATIONS

It is the policy of Union College to make reasonable accommodations for qualified individuals with disabilities. If you are a person with a disability and wish to request accommodations to complete your course requirements, please make an appointment with me or stop by during my office hours as soon as possible, all discussions will remain confidential. You must provide reasonable notice and be in touch with Accomodative Services on the 2nd floor of Schaffer Library, if you have not already, if you wish to take advantage of extra time on exams.

10 GRADING

Each week I will give you some *problem exercises*. You will complete these and submit them online. There will be a *final project*, involving the acquisition, manipulation and analysis of data. Finally, class attendance, participation and engagement are critical components of the course.

- Group Project #1: 20%
- Group Project #2: 25%
- Final Exam: 15%

The remaining 5% is based on participation. The final exam is not cumulative.

Programming projects must be turned in both on paper and electronically via Nexus. Your instructor will show you how to turn in your e-copies. All programs will be done in the Python programming language. CS students will be expected to learn this language on their own during the first five weeks.

No lates will be accepted for any of the group projects. All exams are closed-book, closed-notes.

Letter Grade Scale:

- A: 93-100; A-: 90-92
- B+: 87-89; B: 83-86; B-: 80-82
- C+: 77-79; C: 73-76; C-: 70-72
- D: 60-69; F: 0-59

11 LATE POLICIES

Homework assignments will usually be discussed in class on the day that they are due and thus, without prior agreement, there is NO late submission of assignments allowed. You have three “extension tokens” that can be used for due dates related to your final project for this class. Each token will extend a single project deadline by 24 hours. You can use each token on a different deadline, or use two or even all three on a single deadline. Once all three tokens have been used, no late submissions will be accepted (barring exceptional circumstances).

<https://forms.gle/6W3LrkK4SdhWGSzL7>

12 ATTENDANCE

Class participation is a critical component of the course and attendance is mandatory. I realize that sometimes other things come up (interviews, athletic events, illness, etc.). In those cases, just let me know (in advance, if at all possible) that you are going to be absent. You may not receive credit for make-up material if you did not discuss your absence with me prior to class. No matter how much class you have missed, please do not come to class if you have an illness that is likely contagious, please email me to work out a reasonable solution.

If you do miss class, it is your responsibility to make up any material that you missed. Get notes from a classmate, make sure to complete all homework assignments due or assigned during the class that you missed, and come see me if you have any questions on the material. Unless you have made an arrangement with me ahead of time or you had an emergency, I will

expect you to hand in all assignments by the due date, regardless of whether you were in class. You will not be able to make up missed exams or in-class questions and assignments.

Attendance in class constitutes being present, respectful and engaged. Accessing off-topic websites or software, checking email or phones, *utilizing large language models* or otherwise attending to things not pertinent to the course is distracting to yourself and others and will result in a reduction of your overall grade, up to a 0.5% reduction per class.

13 PARTICIPATION AND ENGAGEMENT

Following these guidelines will constitute positive engagement:

- Respect. This course is a space for rigorous and respectful debate. When confronting ideas and people different from you, lead with curiosity rather than judgement. This commitment extends to all our face to face and digital interactions. We will critique ideas, not people. To protect our shared learning environment, you may not record, photograph, or share any part of our class sessions outside of our class.
- Show up to class on time and prepared. Show up ready to learn by completing the readings and exercises and checking the course webpage. When you are late or unprepared, you are disrespecting the learning experience for the group.
- Embrace intellectual humility. Recognize that there are limitations to your knowledge and that some of your beliefs could actually be wrong. Be curious about your thinking and open to learning from others. This is hard, but so vital to your learning in this course—we'll work on developing this throughout the term!
- Get help when you need it. If you are stuck or confused or lost, be proactive and get help. The best learners and thinkers can figure out when they are stuck and make a plan to get unstuck. Come to Office Hours (Wed/Thurs 2:00-3:30pm Steinmetz 108B), the CS Helpdesk (Sun-Thurs 7:00-9:00pm Olin 107) or ask another student. Often the best person to explain something is the person who just figured it out. Try reaching out to another student in the course who seems like they get it—they will probably be flattered you asked!

14 ACADEMIC INTEGRITY AND "ARTIFICIAL INTELLIGENCE" USE

Union College recognizes the need to create an environment of mutual trust as part of its educational mission. Responsible participation in an academic community requires respect for and acknowledgement of the thoughts and work of others, whether expressed in the present or in some distant time and place. Matriculation at the College is taken to signify implicit agreement with the Academic Honor Code, available at: <http://muse.union.edu/honorcode>

It is each student's responsibility to ensure that submitted work is their own and does not involve any form of academic misconduct. Students are expected to ask their course instructors for clarification regarding, but not limited to, collaboration, citations, and plagiarism. Ignorance is not an excuse for breaching academic integrity. Students are also required to affix the full Honor Code Affirmation, or the following shortened version, on each item of coursework submitted for grading:

Union College has an honor code as follows. That material will appear in every notebook you submit to me for grading.

As a student at Union College, I am part of a community that values intellectual effort, curiosity and discovery. I understand that in order to truly claim my educational and academic achievements, I am obligated to act with academic integrity. Therefore, I affirm that I will carry out my academic endeavors with full academic honesty, and I rely on my fellow students to do the same.

Scholastic dishonesty is misrepresenting someone else's work as your own and will not be tolerated.

For this class in particular, we encourage working together during class time. If you missed something, talk to me, talk to your classmates or reach out via piazza or helpdesk. However ALL HOMEWORK must be completed individually. You are encouraged to:

- Talk about concepts in solutions
- Discuss ideas
- Look up online documentation, or examples

You MAY NOT:

- Share code
- Look at another student's code
- Look up solutions to specific problems on the internet
- Copy or paste any text or code to or from a large language model

Here's the bottom line: if you find yourself turning in work that looks substantially like the work of someone else, you should seriously examine whether you have crossed the line. If you have any doubts, talk to us *before* turning in the assignment.

Ultimately, I may choose to call you into office hours to explain the choices you made in solving a problem. You should be comfortable with explaining the choices you made, how that choice was implemented and why.

Your goal for discussions about any assignment should be that you come away with a better understanding of the problem and of possible ways to approach it so that you can then try out these approaches on your own. You should never leave a discussion with just an answer, without an understanding of how to arrive at that answer. A good general guideline for any

discussion, or interaction with an AI model, is that you should not leave the discussion with anything written or typed.

15 CONTACTING ME OUTSIDE OF CLASS

The best method for contacting me outside of class is to stop by my office during Office Hours or whenever my office door is open. You can also schedule a time with me if my regular office hours don't work. Please contact me via email (doinggg@union.edu) and we can arrange a phone or zoom call. I respond to emails as soon as possible, but it may take up to one day to get a response during the term, and longer between terms.

16 ADDITIONAL RESOURCES

Mental Health and Campus Resources

Union College is committed to supporting and advancing the mental health and well-being of our students. During the course of their academic careers, students often experience personal challenges that contribute to barriers in learning, such as drug/alcohol problems, strained relationships, chronic worrying, persistent sadness or loss of interest in enjoyable activities, family conflict, grief and loss, domestic violence, difficulty concentrating, problems with organization, procrastination and/or lack of motivation. Students also sometimes come to college with a history of learning difficulties (e.g., any form of special education), experience difficulties succeeding in a particular subject (e.g., math, reading), or have experienced some form of trauma be it emotional or physical (e.g., head injury). These mental health concerns can lead to diminished academic performance and can interfere with daily life activities. If you or someone you know has a history of mental health concerns or if you are unsure and would like a consultation, a variety of confidential services are available. The Eppler-Wolff Counseling Center provides free counseling and therapy services (including psychiatry) to all enrolled students. Please call (518) 388-6161 or visit the Wicker Wellness Center in person any weekday between 8:30 and 5:00 to schedule an initial contact appointment. Visit the Counseling Center website for more information.

In a crisis situation, or after hours, contact Campus Safety at (518) 388-6911. The National Suicide Prevention hotline also offers a 24-hour hotline at (800) 273-8255.

Any student who faces challenges securing their food or housing and believes this may affect their performance in the course is urged to contact the Dean of Students (dos_office@union.edu) for support or drop into office hours Monday - Friday 8:30 am - 5:00 pm in the Reamer Campus Center room 306. Furthermore, please notify me if you are comfortable doing so and I will provide any resources I can. The Union College Persistence Fund can provide financial support in times of unexpected hardship to cover needs such as emergency medical

expenses not covered by insurance and basic living expenses. Additional sources of support are outlined on the Dean of Students webpage: <https://www.union.edu/dean-students> .

Assignments

CSC233 HW 00

CSC 233: Assignment 0, Due Jan 13, 2026

1. Setup Colab Notebook (1 pts)

1. Make a copy of the Colab Notebook template:

<https://drive.google.com/file/d/1Ih-HblyS0zAduHUlQfBw4VoeCRx1jyNt/view?usp=sharing>

2. Rename it with your own name: [Name]_CSC233_Assignment0.ipynb
3. Follow the instructions in the Colab Notebook.

president_heights.csv: <https://drive.google.com/file/d/1PC1EDXtvzMqKFuqVHwC6VbVfvG4h6WsQ/view?usp=sharing>

4. Share your notebook with me (doingg@union.edu) as your submission.

2. Runestone Reading & Activities (1 pts)

1. Enroll in our Runestone course “How to Think Like a Data Scientist”

- <https://runestone.academy/runestone/default/user/register>
- your Union College email

- unioncollege_httlads_winter26 as the course name
- for review, you may also use the Python course: unioncollege_py4e-int_winter26_da

2. Read and complete the activities for chapters 1 & 4

- you do not need to install python or anaconda, you can use Colab.

3. *Setup Check-in Notebook (1 pts)*

1. Make a copy of the Check-in Notebook template:

https://colab.research.google.com/drive/18tnFEURw_emX64WbeCRSaA9nyIsNvVsv?usp=sharing

2. Rename it with your own name: [Name]_CSC233_check-in_template.ipynb
3. Follow the instructions in the Colab Notebook.
4. Share your notebook with me (doingg@union.edu) as your submission.

4. *Office Hours (1 pts)*

1. After completing your check-in notebook, come to office hours sometime in the next 2 weeks.

- Location: ISEC 070
- Student/Office Hours:
 - Wednesday 2:00 pm - 3:30 pm
 - Thursday 4:00 pm - 5:30 pm
 - subject to change, check course website for most up-to-date schedule
 - drop-in or schedule a 15 minute slot: <https://calendar.app.google/8bus6pfDvyphR9ar5>
 - by appointment for another time or over zoom
- Be careful not to procrastinate, 2 classes worth of students share the office hours.

Weekly Notes

Week 1

Slides from Week 1

CSC 233 Intro to Data Analytics – Week 01

Today (105')

- Intros (30')
- Fermi questions (15')
- What is DA? (30')
- Syllabus etc. (15')
- Notebook 1 (15')

Introductions

Me:

- Georgia Doing, PhD
- she/her/hers
- My interests: computational microbiology, small cells & big data

My dog Ginny

* Please email me ahead of office hours if you would like me to make sure Ginny won't be there, not a problem at all!

You:

- Name and pronouns
- Help me find you on my roster
- What perspective do you bring to this class? Could be from a life experience, memory, etc. or your major, minor, research, internship, etc.
- Is there a dataset you've wrestled with in the past that you wished you could have analyzed more deeply?

Fermi questions

<https://fermi-questions.andrechek.com/>

- in groups of 3
- if you want a different question, refresh page
- 10 mins
- answers are in orders of magnitude

What is 'Data Analytics'?
