

NAME(S):

Objectives

- To practice pair programming
- To practice python syntax

Reminders for Pair Programming

Pair programming guidelines:

- Roles:
 - driver: has the keyboard and types
 - navigator: guides the driver
- Instructions:
 - You should be talking to each other constantly!
 - You should be able to swap roles at any moment.
 - Swap roles every 5 to 10 minutes.

Dos and Dont's

- Do: Be respectful
- Do: Talk to each other
- Do: Listen to each other
- Do: Explain what you are doing (especially as the driver)
- Do: Think ahead and make suggestions (especially as the navigator)
- Do: Switch roles often
- Don't: Be an overly directive navigator
- Don't: Grab the driver's mouse/keyboard
- Don't: Type silently

Practice the following in IDLE:

1. Start with the group member who is **most** comfortable coding as the **navigator**.
2. Write a function that does not take any parameters nor returns any values.
 - it may print a message, perform operations, check a condition, etc.
3. Write a function that takes a string as a parameter and prints each character.
 - the characters can each be on their own line, or on the same line separated by spaces
4. Write a function that takes a string and two integers as a parameter and returns the substring where the starting index is the first number and the last index is the latter number.
 - are there any conditions the function should check before finding the substring?
5. Be sure to call all your functions with various arguments to test them.
6. Trace at least one of your function calls using memory diagrams in the white space below.
7. Each group member should submit this practice code along with their codon activity.
